

The MAJOR Turbo Pump Station

This unit is a multi purpose transfer pump suitable for dust suppression, site cleaning, pre-emptive flood defence and spillage clearance.

This category 2 three point linkage tractor mounted unit features a galvanised 500 litre (110 gallon) cyclone separation tank with a large access door for cleaning out stones and other debris. The main feature is the large drum that separates unwanted debris from the liquid being pumped. A galvanised steel mesh filtration unit is located in the upper housing and can be easily removed.

The unit is capable of moving up to 6500 litres per minute making light work of spillages and flood clearance. A vacuum pump is fitted as standard to assist priming before the flow of liquid commences.

Pumps	Max Head:	Output:	Max Power	Max Lift:
Elba Centrifugal Chopper Pump	70m	6500 l/min	60kW - 80HP	6-7m
Doda L27 Chopper Pump	90m	3300 l/min	60kW - 80HP	6-7m
Doda L35 Chopper Pump	90m	4300 l/min	60kW - 80HP	6-7m

The 4" outlet manifold is suitable for various applications including:

- Overhead fill
- Umbilical pumping
- Slurry agitation
